Bouncing Cranberries

Begin with 20 or more cranberries. Drop them one at a time from the height of the yardstick. Keep track of how many bounce and how many don’t bounce. The ones that don’t bounce are bad.

<table>
<thead>
<tr>
<th>Berries That Bounced</th>
<th>Berries That Did Not Bounce</th>

<td></td>
</tr>
</tbody>
</table>

Which was most, bouncing berries or not-bouncing berries?

______________________________

Does that mean you got a good bag or a bad bag?
